

Fund Objective

The fund aims to deliver long-term capital and income growth in excess of the market index while offering a higher degree of capital protection to investors by limiting its universe to listed equities of low fundamental risk.

Investment Policy

Aiming for high returns with lower fundamental risk - We invest in high quality companies as this strategy has been shown to outperform the market most consistently and with low risk over long periods of time. The idea is to reduce the probability of permanently impairing shareholder capital by desisting from taking risky bets. Our franchise value lies in differentiated research into the industry dynamics that drive company profitability. The portfolio may invest in participatory interests of underlying unit trust portfolios. The portfolio may also invest in collective investment schemes in property as well as any other securities that the Act may allow from time to time. When investing in derivatives, the manager will adhere to prevailing derivative regulations.

Total Expense Ratio	1,51
Transaction Cost	0,29
Total Investment Charges	1,80
Performance Fee	—
TER Measurement Period	31 March 2020 - 31 March 2023

Total Expense Ratio (TER) is the percentage value of the Financial Product that was incurred as expenses relating to the administration of the Financial Product. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's.

Transaction Cost (TC) is the percentage value of the Financial Product that was incurred as costs relating to the buying and selling of the assets underlying the Financial Product. Transaction Costs are a necessary cost in administering the Financial Product and impacts Financial Product returns. It should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of Financial Product, the investment decisions of the investment manager and the TER.

Total Investment Charges (TER + TC) is the total percentage value of the Financial Product that was incurred as costs relating to the investment of the Financial Product. Cost figures are not yet available.

Risk Profile

Aggressive

You can afford to take on a higher level of risk (i.e., have a greater exposure to equities) because of your investment time horizon and/or your appetite for risk. You know that in taking the risk, you need to be patient if you want to achieve the results. So you are willing to invest for the long-term and are prepared to tolerate some volatility in the short term, in anticipation of the higher returns you expect to receive in five years or beyond.

Glossary Terms

Capital growth

Capital growth is the profit made on an investment, measured by the increase in its market value over the invested amount or cost price. It is also called capital appreciation.

Equities

An equity or share represents an institution/individual's ownership in a listed company and is the vehicle through which they are able to 'share' in the profits made by that company. As the company grows, and the expectation of improved profits increases, the market price of the share will increase and this translates into a capital gain for the shareholder. Similarly, negative sentiment about the company will result in the share price falling. Shares/equities are usually considered to have the potential for the highest return of all the investment classes, but with a higher level of risk i.e. share investments have the most volatile returns over the short term. An investment in this type of asset should be viewed with a 7 to 10 year horizon.

Fundamental analysis

This is a method of evaluating a share that involves attempting to measure its intrinsic value by examining related economic, financial and other qualitative and quantitative factors. Fundamental analysts attempt to study everything that can affect the share's value, including macroeconomic factors (like the overall economy and industry conditions) and company-specific factors (like financial statements, cashflow and management).

Total Expense Ratio (TER)

This is the total costs associated with managing and operating an investment (excluding administration, financial planning and servicing fees). These costs consist primarily of management fees and additional expenses such as trading fees, legal fees, auditor fees and other operational expenses. The total cost of the fund is divided by the fund's total assets under management to arrive at a percentage amount, which represents the TER.

Volatility

Volatility is a measure of 'risk', and refers to the extent to which the price of an investment or fund fluctuates over a certain period of time. Funds with a high volatility usually offer the potential for higher returns over the longer term than low volatility funds.

Additional Information

All reasonable steps have been taken to ensure the information on this MDD is accurate. The information to follow does not constitute financial advice as contemplated in terms of the Financial Advisory and Intermediary Services Act. Use or rely on this information at your own risk. Independent professional financial advice should always be sought before making an investment decision.

The Sanlam Group is a full member of the Association for Savings and Investment SA. Collective investment schemes are generally medium- to long-term investments. Please note that past performance is not necessarily a guide to future performance, and that the value of investments / units / unit trusts may go down as well as up. A schedule of fees and charges and maximum commissions is available on request from the Manager. Sanlam Collective Investments (RF) Pty Ltd, a registered and approved Manager in Collective Investment Schemes in Securities. Additional information of the proposed investment, including brochures, application forms and annual or quarterly reports, can be obtained on request from the Manager, free of charge. Collective investments are traded at ruling prices and can engage in borrowing and scrip lending. Collective investments are calculated on a net asset value basis, which is the total market value of all assets in the portfolio including any income accruals and less any deductible expenses such as audit fees, brokerage and service fees. Actual investment performance of the portfolio and the investor will differ depending on the initial fees applicable, the actual investment date, and the date of reinvestment of income as well as dividend withholding tax. Forward pricing is used. The Manager does not provide any guarantee either with respect to the capital or the return of a portfolio. The performance of the portfolio depends on the underlying assets and variable market factors. Performance is based on NAV to NAV calculations with income reinvestments done on the ex-div date. Lump sum investment performances are quoted. The portfolio may invest in other unit trust portfolios which levy their own fees, and may result in a higher fee structure for our portfolio. All the portfolio options presented are approved collective investment schemes in terms of Collective Investment Schemes Control Act, No 45 of 2002 ³CISCA. The fund may from time to time invest in foreign countries and therefore it may have risks regarding liquidity, the repatriation of funds, political and macroeconomic situations, foreign exchange, tax, settlement, and the availability of information. The Manager has the right to close any portfolios to new investors to manage them more efficiently in accordance with their mandates.

The Manager retains full legal responsibility for the co-named portfolio. First Avenue Investment Management (Pty) Ltd is responsible for the management of the investments held in the Fund. The management of investments are outsourced to First Avenue Investment Management (Pty) Ltd, FSP 42693, an authorised Financial Services Provider under the Financial Advisory and Intermediary Services Act, 2002.

Portfolio Manager Comment

As at 31 March 2023

The local equity market was off to a strong start this year and despite us boasting a structurally low-beta portfolio, we kept up with the market. On a 12-month rolling basis, our returns have continued to hold up. Our return outcomes during the first quarter of 2023 have bolstered our confidence in our ability to extract alpha from our stock picks within the resources sector. As mentioned previously, we aim to do so by selecting those stocks with superior capital allocation and trade at reasonable valuations. Our stock-picking efforts within the sector resulted in a great outcome for the quarter with the sector emerging as the largest contributor to our returns, driven by our zero-weight holding of Impala and Anglo American. During the month of March, we experienced some interruption in the ongoing recovery of our portfolio due to a rally in gold stocks which, as a Quality manager, are structurally underweight. During the quarter, we had some exposure to AngloGold (our preferred pick within the sector) which was offset by our lack of exposure to the other large gold counter, Goldfields. Overall, the decision to avoid some basic material stocks generated sufficient returns to more than offset the losses which resulted from our holdings in consumer staples. Outside of this, the portfolio generated performance evenly across other sectors.

Going forward, we remain committed to a safety-first approach by constructing a low beta portfolio with the ability to withstand unforeseen and unpredictable events in the global economy. It is our view that the probability of a recession is a lot higher in light of the recent tightening in lending standards across US regional banks. The market consensus view is that the slowdown in the bank sector will likely result in the US Fed pausing the current rate-hiking cycle in May. Should this scenario play out, resource counters in South Africa are likely to fare better than other counters. That said, as a Quality manager, our portfolio positioning has never been driven by macro-economic expectations and we remain committed to our approach of identifying High-Quality stocks that present a valuation opportunity to ensure that we remain well positioned for whatever uncertainty lies ahead.
